

CNG Supply

Natural gas is considered one of the most promising alternative fuels for its cleanliness and abundance. With a growing concern for the environment, there is a global awareness for the use of natural gas as fuel for power and stem generation.

Our Natural Gas Compression Station is located at KM 5, Itokin Road, Ikorodu. The gas is compressed up to 250 bar pressure into Jumbo Skids and transported on the road to locations which do not have piped gas.
